SEED GERMINATOR

SEED GERMINATOR (SINGLE CHAMBER) Most suitable for conducting various experiments on a variety of seed under different conditions of temperature and humidity. Atmospheric conditions are created within the chamber to perform different experiment without gone onto the field. The double walled unit has inner chamber made up to S.S. and outer chamber of M.S. Sheet duly powder coated. Temp. from 5°C to 50°C $\pm 1^{\circ}\text{C}$ is controlled by digital temp. Indicator cum controller. Humidity (NOT ADJUSTABLE) is created in a S.S. water reservoir fitted at the bottom to provide 90% to 95% $\pm 3\%$ RH Humidity. Supplied complete with 14 adjustable perforated trays. Complete with cord and plug to work on 220/230 V. AC supply.

The background of the entire page is a close-up photograph of laboratory glassware. In the foreground, a large, clear glass beaker is partially visible. Behind it, several other glass vessels, including beakers and a graduated cylinder, are arranged. A glass dropper is positioned at the top right, with a single drop of liquid about to fall into one of the beakers. The lighting is dramatic, with strong highlights and shadows, and the overall color palette is dominated by deep blues and purples, giving it a scientific and professional appearance.

LABORATORY GLASS WARE PRODUCTS

330 AUTOMATIC WATER DISTILLATION UNIT (GLASS)

All Glass Single & Double Distillation Unit, with Quartz Heater tube vertical & horizontal type. Distillation apparatus units are made from low expansion borosilicate glass tubing. The most sensitive part of unit is heater which is made from fused quartz glass tubes. Housing properties of very high temperature resistance. Borosilicate glass is neutral in its nature produces high purity of distilled water from these units.

Description of Apparatus: These units consist of main boiler. A built in heater enclosed in quartz glass tube. Housing auto water level adjuster, bottom outlet for cleaning waste discharge which is fitted with Teflon screw cap valve. A coil condenser fitted on top for condensing vapours. The whole unit is mounted on epoxy coated metal box stand and covered with acrylic sheets.

Power supply unit is inbuilt no extra attachment is required. Housing steady and reliable power system require 1 k.w. power per heater. These distillation units are more compact, require less space, reliable, easy to operate on continue basis.

Direction for using:

- First connect the side arm connector/silicon tube for distilled water.
- Divide the given silicon tube x two parts according to your requirement i.e.inlet & outlet pipes then start water supply to inlet.
- Switch on power.
- Unit will start automatically when the water level is complete on the boiler.
- There should not be any disturbance/obstacle in outlet pipe so that the water should go smoothly e.g. outlet pipe should not be crushed and should not go above the outlet level

Direction for Washing:

- Boiling cylinder must be in cool condition or lukewarm.
- Stop the water supply
- Open the drain valve of the boiling cylinder
- There should be approx.... Half of the water retained in the boiling cylinder.
- Put the washing liquid (Old hydrochloric acid) into washing cup. Add some clean water into it and then start water supply.
- Open the drain valve after cleaning the dust. Drain the water one or two times after completing the water level

Precaution: Do not switch on the power while cleaning the boiling cylinder.

MAIN FEATURE:

- Unbelievable short worm of time of 9 to 10 minutes.
- Remarkably low cooling water consumption.
- It should be also easily cleanable.
- Distilled water in cold condition
- Automatic start, cutoff and re-start in synchrony with water pressure of opening by electronic circuit
- Powder coated compact stand with option for wall mounting housing all the parts with protective see through cover having indicator of mains AC on & Automatic On/Off switch for heater.
- Ready to operate with only power water connection & drain facilities from the customer side.

Sterilization

- Autoclaving (121°C, 15 psig for 20 Minutes) Clean and Rinse item with distilled water before autoclaving. Certain chemicals which have on appreciable effect on resins at room temperature may cause deterioration at autoclaving temperatures.
- ALWAYS COMPLETELY DISENGAGE THREADS BEFORE AUTOCLAVING.
- Gas - Ethylene oxide formaldehyde.
- Dry Heat - 160°C for 120 Minutes
- Disinfectant - Benzalkonium chloride, formalin, ethanol, etc.
- Radiation - Gamma irradiated At 2.5 Mard with unstabilized plastic.
Sterilizing reduces mechanical strength. Do not use PC vessels for vacuum application if they have been autoclaved

Not recommended of continuous use. Immediate damage may occur.

Some effect after 7 days of constant exposure to the reagent like crazing, Cracking, loss of strength or discoloration.

Little or no damage after 30 days of constant exposure to the reagents.

30 Days of constant exposure cause no damage. Plastics may even tolerate for years.
